Introduction

Did you know that you may be leaving thousands of dollars on the table every year? That money isn't lost to taxes or overhead, it's silently evaporating through outdated payment systems and collection friction. You deserve to keep it.

In fact, for many high-growth firms, **the annual loss exceeds \$25,000**. This guide shows you the proven blueprint one firm followed to stop the profit leak and secure stable, friction-free operations. It's time to retire the systems that are holding your revenue hostage.

The Profitability Leak

Every accountant knows merchant fees are a cost drain—you might even say it's a "common pain point among similar peers." But what you might not realize is that the loss is often unnecessary.

When your current system forces you to absorb fees, you're willingly handing over 2.9% to 3.5% of every invoice to processors. This percentage isn't arbitrary; it's a composite of three separate, unavoidable costs:

1.1

The Silent Killer: Merchant Fee Erosion

Every accountant knows merchant fees are a cost drain—you might even say it's a "common pain point among similar peers." But what you might not realize is that the loss is often unnecessary.

When your current system forces you to absorb fees, you're willingly handing over **2.9% to 3.5%** of every invoice to processors. This percentage isn't arbitrary; it's a composite of three separate, unavoidable costs:

Interchange Fees

The largest component, paid to the bank that issued your client's card.

Assessment Fees

The largest component, paid to the bank that issued your client's card.

Processor Markup

The fee charged by the technology provider (your current vendor).

This cost is compounded by hidden system expenses where many vendors charge small amounts for everything or lock essential features behind add-ons, guaranteeing you overpay for fragmented service.

1.1

The Silent Killer: Merchant Fee Erosion (Cont'd)

The solution is the contrast. While credit card fees are a percentage that escalates with the invoice total, other payment networks like ACH are minimal and capped. This disparity represents your biggest opportunity for profit reversal. The table below illustrates the cost you absorb versus the efficiency you could gain on a per-client, per-year basis.

Loss Scenario	Invoice Amount	Your Current Loss (3% fee)	Ideal Cost (ACH Max Cap)	Savings Per Client Annually (12x)
Small Transaction	\$500	\$15.00	\$5	\$120.00
Standard B2B	\$2000	\$60.00	\$5	\$660.00
Large Recurring	\$5000	\$150.00	\$5	\$1,740.00

1.2

The Collections Time Trap

The profit leak isn't just fees; it's the massive drain of staff time caused by systemic process failure, known as the Workflow Tax.

Two primary culprits contribute to this heavy tax:

The Manual Check Delay and DSO Risk

Accepting checks introduces multiple, lengthy friction points that directly halt your cash flow. This archaic cycle significantly slows your Days Sales Outstanding (DSO), making it harder to cover crucial operating expenses, manage vendor payments, and meet payroll deadlines.

The Billing Cycle Time Trap

Systems that cap automated reminders are still a major operational failure that consumes staff time.

To illustrate the verifiable costs embedded in these archaic processes, we contrast the verified median cost of processing a paper check versus an electronic ACH payment.

1.2

The Collections Time Trap (Cont'd)

According to data compiled by the Association for Financial Professionals (AFP), the median cost of issuing a paper check (including labor, materials, and bank fees) is roughly \$3.00 per transaction. Conversely, the median cost of an electronic ACH payment is only \$0.50.

This difference, a \$2.50 saving per payment, is money your firm could keep. The table below uses these verified costs to illustrate the immediate, compounded profit leak for practices of various sizes.

Cost Scenario	Monthly Volume	Direct Costs of Checks (≈\$3.00 each)	Direct Cost of ACH (≈\$0.50 each)	Annual Savings Potential
Low Volume Practice	\$500	\$15.00	\$5	\$120.00
Medium Volume Practice	\$2000	\$60.00	\$5	\$660.00

The Accountability Checklist

To transform AR from a cost center to a profit center, your next payment solution must deliver these three non-negotiable capabilities.

2.1

Non-Negotiable: Strategic Fee Control

The ability to eliminate fee erosion starts with one crucial tool: a payment platform that gives you true financial agency.

Most payment vendors default to a system that assumes the invoice creator (your firm) must absorb all credit card fees. They offer no flexibility because their technology wasn't built for strategic client management. This lack of choice forces you into a dilemma: either absorb a **3.0% loss** on every invoice, or risk annoying your best clients by charging them fees, even though their business is high-value.

2.1

Non-Negotiable: Strategic Fee Control (Cont'd)

A modern solution must be able to toggle credit card fees on/off for each client and invoice. This feature is a game-changer because it allows you to be strategic with your profitability:

**Protecting Premium Clients**

Imagine a recurring client who pays tens of thousands of dollars monthly. To maintain that long-term, high-value relationship, you can offer the strategic perk of covering their credit card fees.

**Maximizing Small Transactions**

For a one-time client or small invoice, taking on a 3.0% loss severely cuts into your profits. You can set the default to pass the fee onto them, protecting your margins where the relationship risk is low.

This control allows you to eliminate unnecessary losses while reinforcing client loyalty. The natural result is that fees are passed on only when appropriate, immediately driving clients toward low-cost ACH, which for a business owner is a non-brainer.

2.2

Non- Negotiable: Flawless Accounting integrity

Your AR system must adhere to CPA best practices. Why? Because the vast majority of generic payment tools compromise your books for speed.

Many systems prematurely reduce Accounts Receivable before the cash is fully received, creating a reconciliation nightmare and inflating your working capital figures. When a payment vendor fails here, your team is forced to spend valuable time fixing their errors, not serving clients.

A proper AR solution must put payments into undeposited funds until fully cleared. This commitment to accounting purity:

**Mitigates Risk**

It prevents inaccurate reporting of paid invoices before funds are verified and available.

**Ensures Accuracy**

It ensures your balance sheet accurately reflects cash on hand according to GAAP.

**Saves Time**

It eliminates the stress of manual clearing account work, making reconciliation seamless.

2.3

Non-Negotiable: The Automated Workflow

Billing should run itself. The ideal system eliminates the Time Trap by providing complete automated workflow freedom. This freedom is defined by these critical, non-negotiable features:

**Unlimited, Customizable Billing Sequences**

The system must provide unlimited billing sequences that replace the inefficient three-reminder limit. This ensures every overdue invoice receives timely, customized follow-up without consuming any staff time.

**Proactive Visibility**

Billing is not just about reminders; it is about information. The system must provide full visibility, showing if an invoice email has been opened or bounced back. This allows staff to react quicker to bad data (like wrong client emails) instead of blindly chasing a client who never received the invoice.

**Training Ease**

The technology must be intuitive. The client portal must be simple enough for account managers to teach a customer how to use in minutes, guaranteeing high client adoption and reducing the burden on your team to provide ongoing technical support.

Introducing Alternative Payments

3.1 The Platform That Checks All The Boxes

You have reviewed the blueprint. You know that eliminating the \$25,000 revenue leak requires a solution built specifically for financial control and accounting integrity—not a generic payment processor.

The solution is a platform that delivers every feature on your checklist, backed by an unwavering commitment to your firm's profitability: Alternative Payments.

Reversing Fee Erosion

We deliver the non-negotiable strategic fee toggle, allowing you to protect the margins you saw eroding in our fee comparison table.

Flawless Integrity

We guarantee CPA-approved reconciliation via proper undeposited funds flow, eliminating the accuracy risks of premature AR reduction.

Zero-Stress Workflow

We provide robust automation, including unlimited collections and full visibility, that eliminates the manual "Workflow Tax."

By moving your billing to a single, specialized platform, you immediately eliminate the need for manual link resending, streamline collections, and finally stop paying to get paid.

True scalability requires a vendor that acts as a reliable partner, not a source of frustration.

Unlike vendors whose support is reactive rather than proactive, Alternative Payments provide dedicated support that understands accounting workflows. The system is intuitive, and the ease of use allows your account managers to teach a customer how to use the self-service portal quickly, reducing your support overhead entirely.

Alternative Payments is committed to being a stable, dedicated solution for financial services, giving your firm the peace of mind that your critical AR systems are not vulnerable to the chaos of sudden acquisitions or changing platforms.

3.2 A Trusted System for You and Your Clients

True scalability requires a vendor that acts as a reliable partner, not a source of frustration. By adopting a reliable, high-integrity system, you gain the confidence to roll it out to your clients. This creates a unified, smooth financial ecosystem between the firm and its clients.

3.2

A Trusted System for You and Your Clients (Cont'd)

Unlike vendors whose support is reactive rather than proactive, we provide dedicated support that understands accounting workflows. Our systems are intuitive, and the ease of use allows your account managers to teach a customer how to use the self-service portal quickly. This focus on intuitive design ensures high client adoption, minimizing technical questions directed back to your staff.

We are committed to being a stable, dedicated solution for financial services, giving your firm the peace of mind that your critical AR systems are not vulnerable to the chaos of sudden acquisitions or changing platforms.

The final stage of the profitability blueprint is realizing that the technology you adopt for your firm can become a powerful new revenue channel.

By partnering with a solution that guarantees efficiency and integrity, you create three immediate returns:

Client Value-Add (Retention)

You enhance the client's experience by offering an automated, professional billing process that makes paying effortless. This positions your firm as a strategic, technology-forward advisor, boosting client retention.

Simplified Bookkeeping (Workflow)

Your job becomes easier. The system follows CPA best practices (undeposited funds), making reconciliation effortless. Fewer errors, faster closes, and less stress for your entire team.

The Profit Reward (Revenue Share)

The firm is rewarded for making a trusted, valuable recommendation. Our reliable program is structured as a transparent Revenue Share model, backing your confidence with direct profit.

The time to stop the leak is now. You've seen the blueprint for eliminating fee erosion, reclaiming staff time, and securing your firm's financial integrity. The next step is not another reading assignment, it's quantifying your exact savings!
